

**AMENDMENTS TO THE ABSTRACT**

Please insert the following paragraph(s) as the abstract for in the currently filed specification:

-- The invention relates to a biaxially-oriented opaque polypropylene multi-layer film, made from a base layer, at least one first intermediate layer arranged thereon and a first surface layer arranged on the first intermediate layer. The first intermediate layer has essentially no vacuoles. The first surface layer comprises at least 80 wt.% of a propylene/ethylene copolymer with an ethylene content of 1.2 to <2.8 wt.% and a propylene content of 97.2-98.8 wt.%, a melting point in the range 145 to 160°C and a fusion enthalpy of 80 to 110 J/g. The base layer comprises vacuoles and has a density in the range 0.35 to 0.6 g/cm<sup>3</sup>. The invention further relates to the use of said film for the in-mould labeling of containers made from thermoplastic polymers. --
